

Single Molecule Localisation Microscopy and OMER0

Ian Munro

Imaging is fundamentally diffraction-limited but more information available by knowing all sources are fluorescent molecules - i.e. small point sources.

Airy disk Intensity plot.

The location of a single point-source can be determined to sub-pixel resolution.

Label sample with fluorophores, crucially ensure that most are switched off PALM, STORM etc

No standard file format.
OMERO solution
needed.

PALMsiever. Matlab

ThunderSTORM. Java, Imagej plugin

OMERO menu added to PALMsiever allows user to choose a dataset

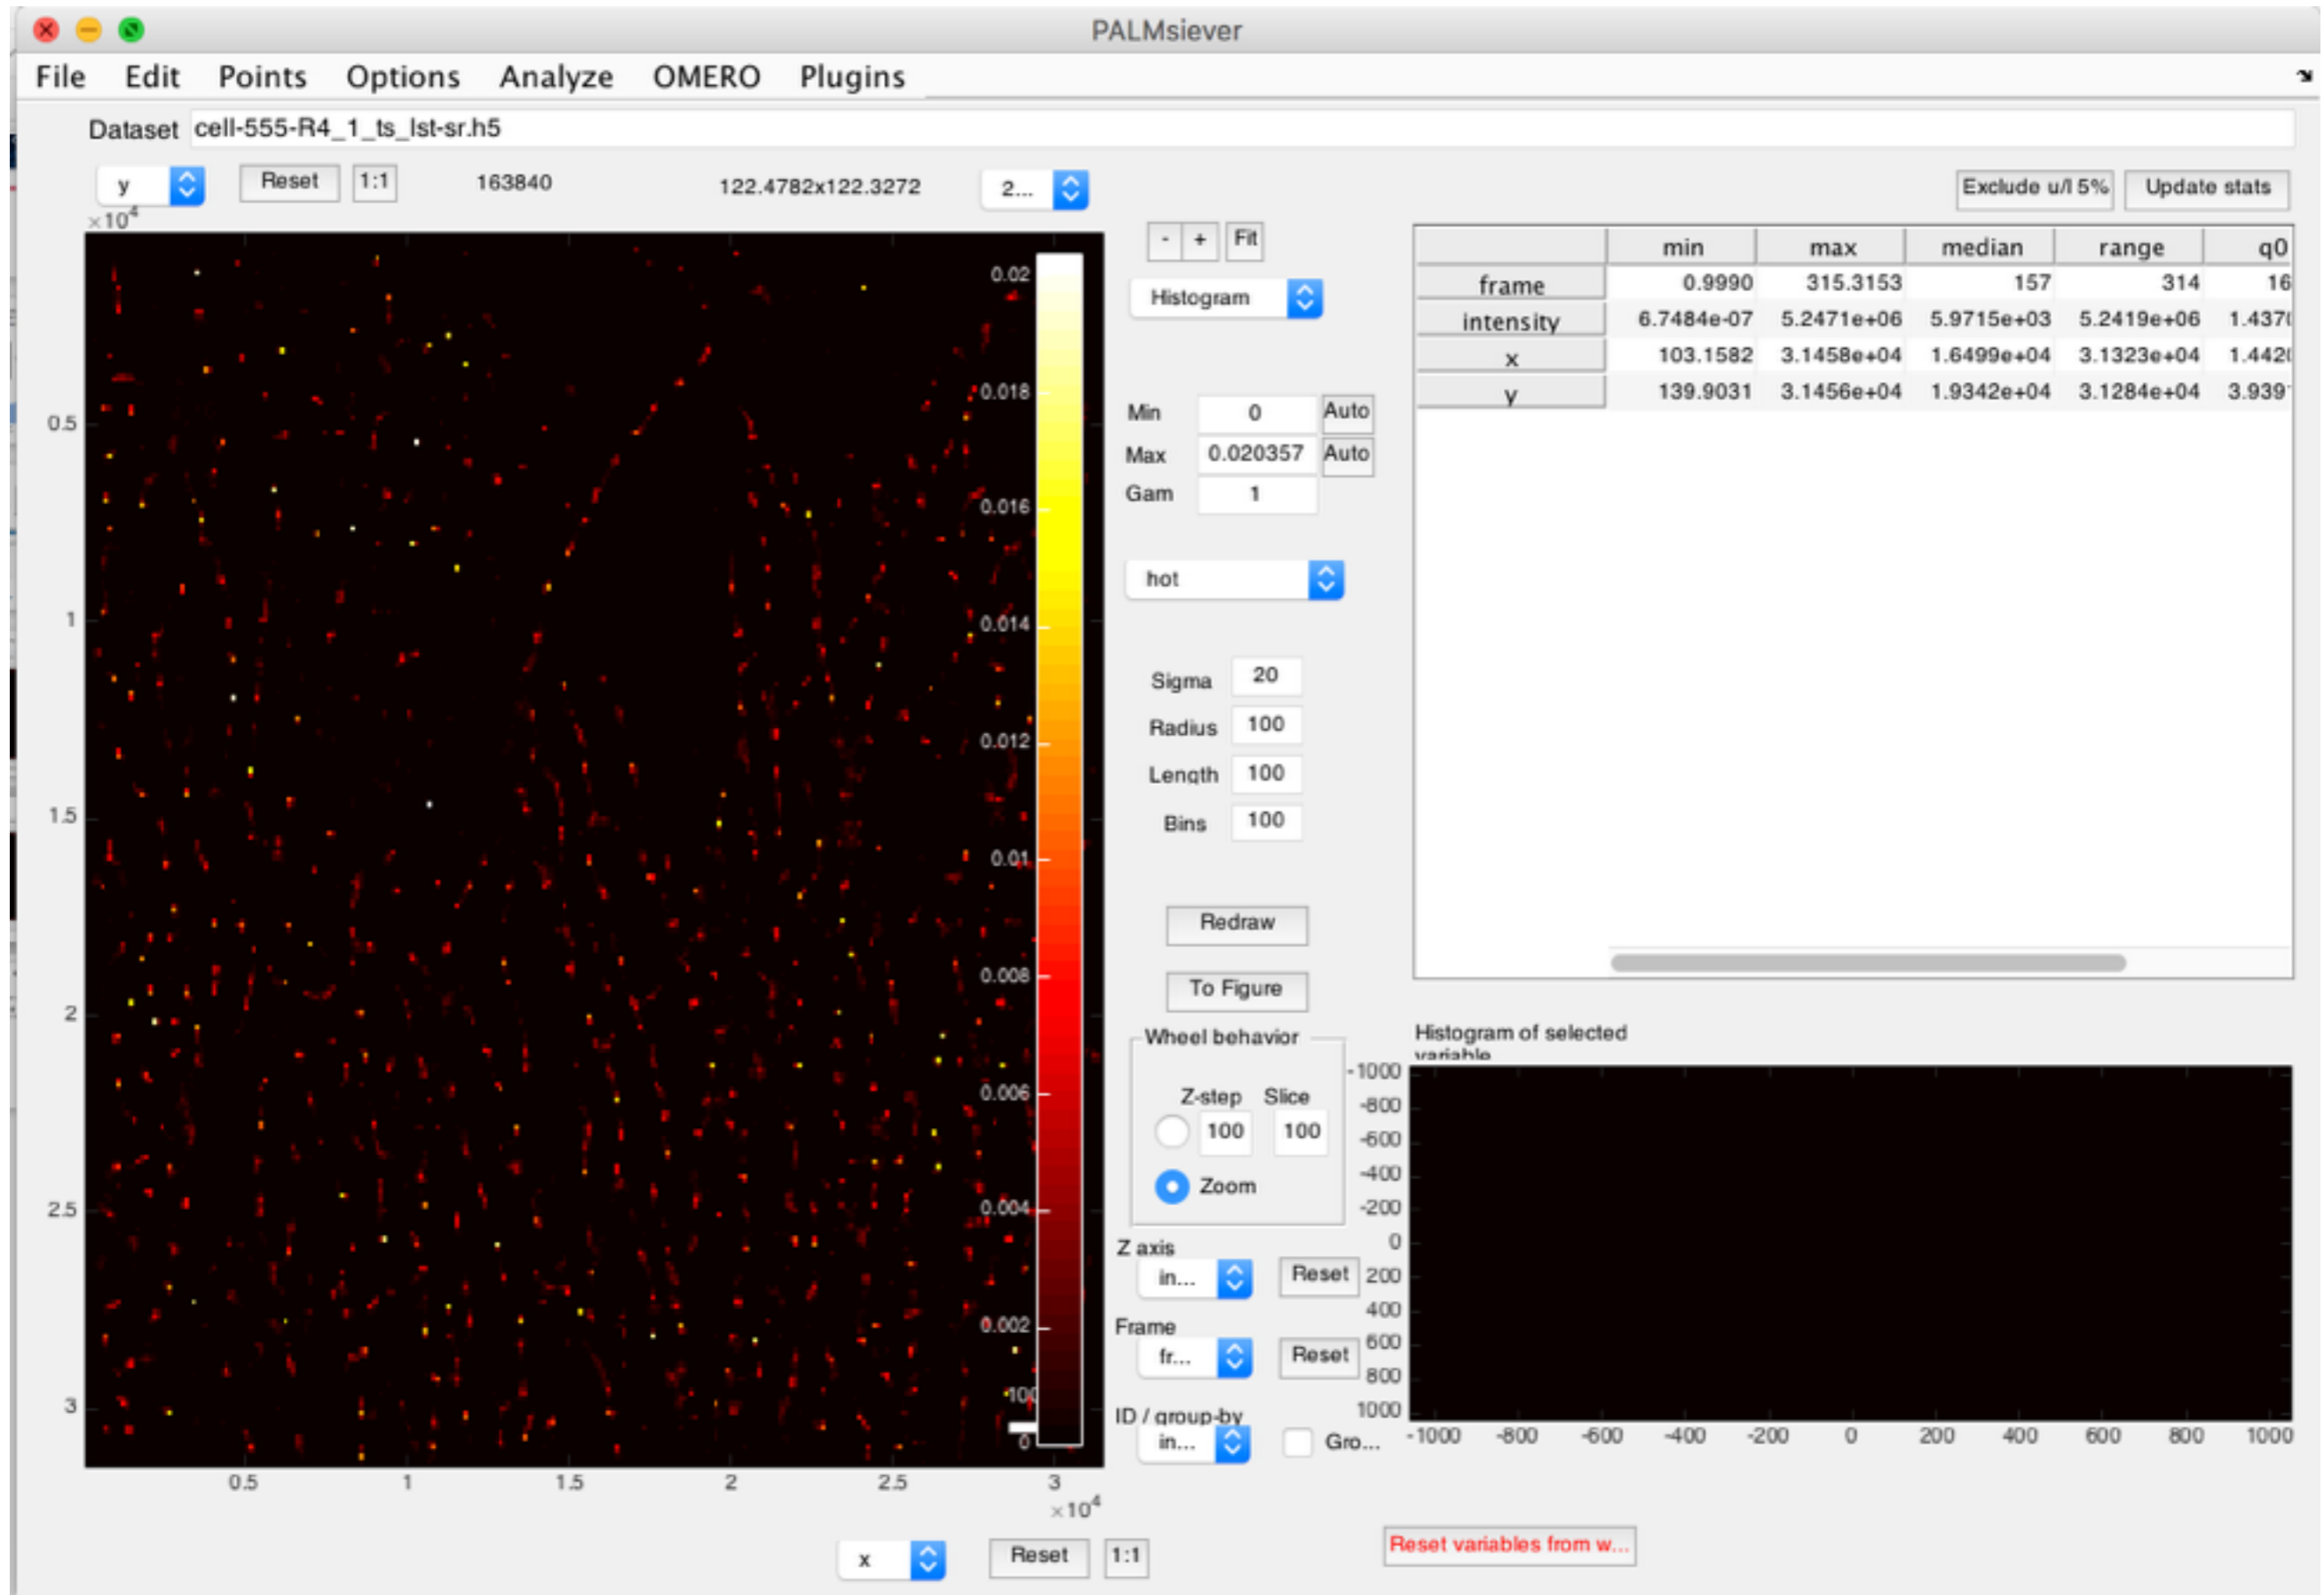

Then choose a Table

The screenshot displays the PALMsiever software interface. The main window shows a 3D point cloud of a cell, with axes ranging from -1000 to 1000. A central dialog box prompts the user to "Select an annotation:" with a list containing "cell-555-R4_1 ts lst-sr.h5". To the right, a statistics table provides summary data for various variables. Below the table is a histogram titled "Histogram of selected variable".

	min	max	median	range
Dummy_sigma_X	19.9800	20.0200	20	0
Dummy_sigma_Y	19.9800	20.0200	20	0
T	0.9990	1.0010e+03	500.5000	999
X	-1.0531e+03	1.0446e+03	6.8492	2.0957e+03
Y	-1.0400e+03	1.0326e+03	4.2297	2.0705e+03
Z	-372.5937	332.8865	-7.6003	704.7747

Additional interface elements include a menu bar (File, Edit, Points, Options, Analyze, OMERO, Plugins), a dataset selection field, zoom and fit controls, and a "Reset variables from w..." button at the bottom right.

Super resolved image

OMERO menu added to ThunderSTORM allows user to choose a dataset

N.B. same UI as
PALMsiever

(Fiji Is Just) ImageJ

Future work

UI improvements.

UI was to-hand and easy but too many Imagej-OMERO interfaces already.

Clean disconnect on closing Fiji needed.

Currently Imagej OMERO login separate from ThunderSTORM.

Select Table in a single step rather than as a 2-step process.

More extensive OMERO interface required for PALMsiever?

Other File formats.

Handling in Bio-Formats required?

possible to re-use ThunderSTORM import code to generate OMERO Tables?
