The problem

High throughput imaging and analysis generates lots of metadata...

- How to resolve the disconnect between data and images?
- How to verify the metadata is correct?
- How to look for trends?
- How to make access simple?
Visualise, query, sort and filter thousands of images and metadata from within your browser.

Responsive and easy to use zoomable HTML5 interface

Create a Zegami UI to query your data very quickly
Diagrams – Alternative splice visualisation

Movies

Plugin your own image search algorithms

Plugin your own viewers
